QIS Preparedness Assessment

Is your facility prepared for the Quality Indicator Survey (QIS)?

QIS is the revised long term care survey process—it is a two-stage approach to determine facility compliance with federal regulations. Stage I includes preliminary investigations conducted through resident, family, and staff interviews; resident observations; record reviews; and analysis of Minimum Data Set (MDS) data. Stage II involves in-depth quality investigations using Critical Element Pathways that address assessment, care-planning, care provision, and reassessment. QIS has already rolled out in almost half the country. Will your facility be ready?

Pendulum, the premier long term care risk management consulting firm, and Pathway Health Services, a professional management organization, have teamed up to bring you the QIS Preparedness Assessment.

The QIS Preparedness Assessment is a one-day, on-site assessment that assists your organization in preparing for a QIS. A QIS professional conducts an assessment of your facility's awareness and understanding of the QIS process, Stage I process, Triggered Critical Elements, and Stage II process. Based on the assessment findings, the QIS professional will conduct a customized training for leadership and designated staff. The QIS professional and leadership will then complete a QIS Preparedness Action Plan to assist your organization in implementing the necessary steps for QIS readiness.
