

PENDULUM

Fall Management Module

Managing risk in your facility starts with preparing your staff to provide the best possible care. Pendulum's Information and Training Modules are designed to educate all levels of facility staff in managing key high-risk areas. The modules are geared toward the skilled nursing or assisted living environments, or a combination of both. A thorough presentation, discussion questions, and sample resources are provided with each module.

■ What's in this Module?

Preventing a fall can mean preventing a serious injury or even death. With so much on the line, knowledge of fall management techniques is critical. The Fall Management Module will help the facility expand its fall management program. The module includes:

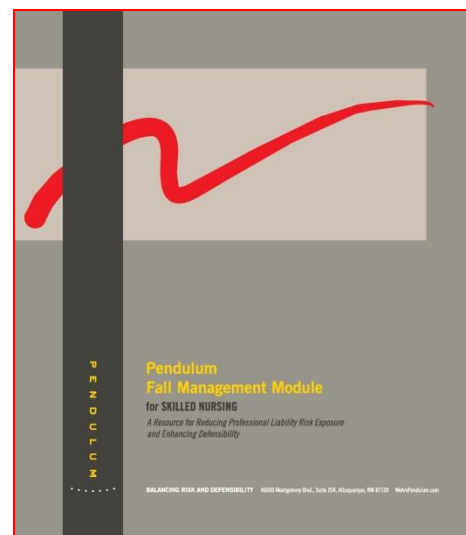

- An in-service training program on fall management
- An educational unit on physical restraints
- Restraint reduction tools for skilled nursing
- Guidelines on best practices for fall management and restraint use
- Sample policies and procedures
- For skilled nursing, AMDA's *Falls and Fall Risk Practice: Clinical Practice Guideline* and the InService Monthly DVD *Fall Prevention*
- For assisted living, the MED-PASS SmartStaff In-Service Program for Staff Development, *Aging Process*, and the Senior Living University DVD, *Reducing Resident Falls*

Both modules include a CD containing the contents of the module, including the training program in PowerPoint format.
