

PENDULUM

“Resources for Risk” Resource Centers

■ What is a “Resources for Risk” Resource Center?

The “Resources for Risk” Web resource center is a Pendulum product designed to provide a client with the ability to offer its clientele a branded, password-protected Web portal with extensive risk management resources. The resource center contains more than 1,000 management tools, forms, policies, procedures, checklists, and more. Many of the documents have been authored by Pendulum, but the resource center also has public domain documents from CDC, CMS, FEMA, OIG, GAO, and other governmental and public sites.

The unique aspect of the “Resources for Risk” resource center is that Pendulum can build a portal with a client’s logo, colors, and its own risk management resource documents to offer a powerful, password-protected risk management website. Pendulum documents as well as the clients’ documents can be loaded, and the website is hosted with a company-branded URL such as <https://ResourcesForRisk.com/ABCInsurance>.

Pendulum’s clients will enjoy a unique Web address (URL) that can be marketed without any reference to Pendulum.

■ Cost (One-year Agreement)

\$2,500.00 (one-time setup fee*)

\$10,000.00 (annual fee)

* *More complex resource centers may have a higher setup fee*

■ A Customized Resource Center

The Resources for Risk resource center allows an organization to offer its clients numerous valuable risk management materials on a website that looks and feels like their own company website.

■ Client-specific Resources

Clients are encouraged to send Pendulum any of the resources and/or documents that they wish to be made available to their own portal users. Pendulum will review the documents and upload them to the portal, making the resource center a uniquely “client-oriented” tool. No other Web portal will be the same as this client-unique site.

■ Features

Features of the resource center include unlimited user access; a registration system built into the center, with client interaction to approve users; a news section unique to each client; email capability for entire user group with news and updates; a secure domain; digital eAssist and FAQs unique to each client portal; and portal-specific tracking features as well as Pendulum provided usage reports.
